OUR OBSESSION: THE QUALITY OF OUR PRODUCTS

Snazzy:

a classy and trendy adventure

Snazzy Collection

Hand-tufting has been part of our history for nearly 3 decades. Back in the early 90's, we were looking for new weaving techniques to be added on to our portfolio - which already included the hand-weaving (flatweave) and the hand-knotting since the year the company started (1946).

The hand-tufting, being such a be the best option. So, we gathered our team of talented of the constant improvement that craftsmen, trained them and put together a new production department at our mill.

Almost 30 years later, we preserve the hand-tufting tradition, which has improved and become even more precise with the combination of the robot tufting technique.

This collection, launched just after flexible technique, seemed to the year of our 70th anniversary, is a celebration and it is also the result we have been seeking ever since our company was founded.

> Timeless and stylish, our Snazzy collection is a contemporary statement, available in all sizes, shapes and colors.

It has been developed in-house by our creative team of designers, who work closely with our craftsmen to create the perfect patterns, using the finest materials and the trendiest colors.

The collection includes 38 stunning carpets and patterns which can also be produced in other colors and materials upon request.

We have kept it simple and classy, while still pushing the boundaries of imagination and creativity as we do every time.

GOOD TO KNOW

It all starts by choosing the colors and design/ pattern and for this you can rely on our design team to come up with proposals, artworks and simulations. The second step is to select the material, bearing in mind that, for instance, wool is an animal fiber which is therefore warm. A botanical silk carpet, being a vegetal fiber, will be slightly fresher and smoother. The material selection must also be related to the place where the carpet/rug is being laid: for high traffic places, we recommend wool and a lower pile, while for residential and other lower traffic areas, a higher pile and finer yarns such as botanical silk can be used. A mix of materials is also suitable for high traffic areas - it is important to ask for our team's advice on this, when placing the order, to ensure that you are choosing the right product for your project. When a rug is being placed underneath a dining table, we recommend to leave at least 60 cm all around the table, to allow space for chairs. It is also advisable to rotate the rug from time to time, so that the light falling on the carpet does not produce any color change and also to avoid furniture marks on the surface of the rug.

The best way to keep a rug impeccable is to vacuum it very often. This will not only clean the dirt but it will also recover the pile. This will extend the life of your rug/carpet as well as enhance its beauty and allow it to maintain its original look. Depending on the materials used and production technique and as our products are hand-made, dimensions may vary up to 5%. If there is a minimum or exact dimension to be respected, please state it when placing the order.

As all our rugs are made from natural fibers, variations in terms of color might occur between batches of yarn and dye baths.

The hand-tufting is one of the most flexible techniques – it allows the creation of any pattern, almost as if it was a painting. This versatility makes hand-tufted carpets a premium solution for both residential and commercial projects. Whether it is a family home, a high end store, or a hotel lobby, hand-tufting is the perfect solution for all purposes. Besides embellishing the room, hand-tufted rugs and carpets are also well-known for creating warm acoustic environments.

WALL TO WALL

A Ferreira de Sá rug can easily become a wall-to-wall carpet, produced exactly in the shape and dimensions required to fit the area where it is being installed.

hen placing your order, it is important to state if it is an area rug or a wall-to-wall carpet as the finishing will be slightly different and our team will be able to work from DWG plans to find out the accurate dimensions required as well as give you some useful hints.

Our experienced design department works closely with our architects and together they study the best solution for each project.

With us, no details are left at random and you can rest assured that everything will fall into place in the end.

To ensure a perfect and flawless finishing touch, our talented team of fitters is always ready to travel the world and perform installations.

OUR MATERIALS

In order to create masterpieces, Ferreira de Sá From pure wool, to our smooth botanical silk, selects only the finest and most durable rawmaterials.

Our yarn is carefully chosen and it is submitted and textures. to a very strict quality control process.

we mix and play with yarns and colors, which allows us to create original and joyful patterns

With 70 years of experience is this field, we have learned that much can be done when we combine versatile materials with premium design.
